No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                         55.5

New gastrointestinal polynucleotides, CS198, and their detection - used for developing products for the diagnosis and treatment of gastrointestinal disorders, e.g. cancers, gastric ulcer or gastritis.

Claim 26; Page 103; 127pp; English.

AAW79677-W79680 are synthetic CS198 derived peptide fragments which are used in a method to detect the presence of a target human CS198 polynucleotide in a test sample. The CS198 gene is useful as a marker for gastrointestinal (GI) tract disorders. The methods and products can be used in detecting, diagnosing, staging, monitoring, prognosticating, preventing or treating, or determining the predisposition to diseases and conditions of the GI tract, such as GI tract cancer, Barret's oesophagus, gastric ulcer, leiomyoma, polyps, cancer, Barret's oesophagus, Crohn's disease, ulcerative

  ADA26384
The invention describes a method of detecting the presence of a target CS198 polynuclectide in a test sample. The method comprises contacting the test sample with at least one CS198 specific polynuclectide or its complement, and detecting the presence of the target CS198 polynuclectide in the test sample, where the CS198-specific polynuclectide has at least to the test sample, where the CS198-specific polynuclectide has at least to identity to a polynucloctide having any of the 27 fully defined sequences of 34-2894 bp (S1-27) given in the specification, or their

The invention relates to a method of detecting the presence of a target CC S198 polynucleotide comprising contacting the test sample with at least Cne CS 198-specific polynucleotide. The method is useful for detecting Cd diseases of the gastrointestinal (GI) tract organs, particularly cancer. The CS 198 polynucleotides, polypoptides and antibodies are useful for CC treating or detecting, staging, monitoring, prognosticating, preventing CC treating or determining prediposition to diseases and conditions of the CG I tract such as cancer, gastric ulcer, gastritis, Crohn's disease, CC ulcerative colitis, pancreatitis and Barret's oseophagus. The CS 198 CC polypoptides are useful as standards or reagents in diagnostic memunoassays, as components or as target sites for various therapies. CC antibodies directed against at least one epitope contained within these CC polypoptides are useful as delivery agents for therapeutic agents, in diagnostic tests and for screening for conditions or diseases associated CC with CS 198, particularly cancer. Monoclonal antibodies may also be used CC polynucleotide is also useful in gene therapy and drug screening. The CS 198 CC polynucleotide is also useful in gene therapy and drug screening.

   diagnosing, staging, monitoring, prognosticating, preventing or trover determining the predisposition of an individual to, diseases an conditions of the gastrointestinal tract, e.g. cancer and in generable. This is the predicted amino acid sequence of the human CS protein derived from the CS198 consensus sequence shown in seq id
   The present invention relates to human NC1, NC2 and NC3 proteins and coding sequences (ADG14340-ADG14345). The coding sequences are useful for detecting and screening proliferative insulin-producing cells as well as differentiation and proliferation of such cells and their precursors as analogous cells in treatment of e.g. PHHI and diseases due to differentiation/proliferation abnormality, diseases of the nervous system and pancreas. The coding sequences are also useful as spontaneous proliferation models of pancreas beta-cells. The novel genes NC1, NC2 and NC3 were isolated from the pancreas of PHHI patients, which were used in testing for the detection of proliferative insulin-producing cells or pancreas beta-cells by Northern analysis.

 Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

   Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

New gastrointestinal polynucleotides, CS198, and their detection - used for developing products for the diagnosis and treatment of gastrointestinal disorders, e.g. cancers, gastric ulcer or gastritis.

Claim 26; Page 103; 127pp; English.

AAW79677-W79680 are synthetic CS198 derived peptide fragments which are used in a method to detect the presence of a target human CS198 polynucleotide in a test sample. The CS198 gene is useful as a marker for gastrointestinal (GI) tract disorders. The methods and products can be used in detecting, diagnosing, staging, monitoring, prognosticating, preventing or treating, or determining the predisposition to diseases and conditions of the GI tract, such as GI tract cancer, Barret's oesophagus, gastric ulcer, gastritis, leiomyoma, polyps, Crohn's disease, ulcerative

Detecting the presence of a target CS198 polynucleotide in a test sample comprises contacting the sample with a CS198 specific polynucleotide and detecting the presence of the target CS198 polynucleotide in the test

sample.

Claim 17; Page 52; 67pp; English

The invention describes a method of detecting the presence of a target CC CS198 polynucleotide in a test sample. The method comprises contacting CC the test sample with at least one CS198 specific polynucleotide or its CC complement, and detecting the presence of the target CS198 polynucleotide for its CC complement, and detecting the presence of the target CS198 polynucleotide in the test sample, where the CS198-specific polynucleotide has at least CC soft identity to a polynucleotide having any of the 27 fully defined CC sequences of 34-2894 bp (S1-27) given in the specification, or their CC diagnosing, staging, monitoring, prognosticating, preventing or treating, CC or determining the predisposition of an individual to, diseases and CC conditions of the gastrointestinal tract, e.g. cancer and in gene CC therapy. This is the amino acid sequence of a synthetic peptide based on CC the predicted human CS198 protein sequence derived from the CS198 CC consensus sequence shown in seq id 27.

  The invention relates to reagents and methods for detecting diseases of the gastrointestinal (GI) tract. The method involves detecting the presence of target CS198 polynucleotide in the test sample. The methods and compositions of the present invention are useful for the diagnosis, prevention and/or treatment of diseases or conditions associated with aberrant expression or activity of the CS198 polypeptide, such as cancer of the gastrointestinal tract. These are also useful in gene therapy. The present sequence is a CS198 peptide used to illustrate the method of the
   Sequence 33 AA;
   and treatment of diseases associated with inappropriate P expression. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing inactive proteins or to supplement the patients own production of P. Additionally, N may be used to produce the colon cancer-associated Ps, by inserting the nucleic acids to produce the colon cancer-associated Ps, by inserting the proteins. N and P into a host cell and culturing the cell to express the proteins. N and P
  AAH32943 to AAH37195 and AAG73514 to AAG77788 represent human colon cancer-associated nucleic acid molecules (N) and proteins (P), where the proteins are collectively known as colon cancer antigens. The colon cancer antigens have cytostatic activity and can be used in gene therapy and vaccine production. N and P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P expression. For

The invention relates to a method of detecting the presence of a target CC CS 198 polynucleotide comprising contacting the test sample with at least cone CS 198-specific polynucleotide. The method is useful for detecting CC diseases of the gastrointestinal (GI) tract organs, particularly cancer. The CS 198 polynucleotides, polypeptides and antibodies are useful for CC detecting, diagnosing, staging, monitoring, prognosticating, preventing, CC treating or determining predisposition to diseases and conditions of the CC difference of the colitis, pancreatitis and Barret's oesophagus. The CS 198 collegative colitis, pancreatitis and Barret's oesophagus. The CS 198 collegative colitis, pancreatitis or reagents in diagnostic through the components or as target sites for various therapies. Antibodies directed against at least one epitope contained within these CC polypeptides are useful as delivery agents for therapeutic agents, in CC diagnostic tests and for screening for conditions or diseases associated with CS 198, particularly cancer. Monoclonal antibodies may also be used

   pancreas and its encoded protein. The invention further comprises:
proteins and peptides, preferably isolated, that contain a sequence
encoded by the novel nucleic acid; and methods for diagnosis and
creatment of pancreatic cancer, using a substance that inhibits or binds
to the protein or its DNA, including: an antisense oligonucleotide, short
interfering RNA or ribozyme directed against the pancreatic protein, an
organic molecule, particularly having a molecular weight below 5000,
especially 300, that binds to the pancreatic DNA, an aptamer or
(monoclonal) antibody, preferably human or humanized, that binds to the
pancreatic DNA, or an anti-idiotypic antibody raised against the
monoclonal antibody, any of which may be derivatized with a reporter

New gastrointestinal polynucleotides, CS198, and their detection - us for developing products for the diagnosis and treatment of gastrointestinal disorders, e.g. cancers, gastric ulcer or gastritis. used

Claim 26; Page 103; 127pp; English.

This sequence represents the C-terminal of the human CS198 protein which is used in a method to detect the presence of a target CS198 protein which polynucleotide in a test sample. The CS198 gene is useful as a marker for gastrointestinal (GI) tract disorders. The methods and products can be used in detecting, diagnosing, staging, monitoring, prognosticating, preventing or treating, or determining the predisposition to diseases and conditions of the GI tract, such as GI tract cancer, Barret's oesophagus, gastric ulcer, gastritis, leiomyoma, polyps, cancer, Barret's Crohn's disease, oesophagus, ulcerative

  The invention describes a method of detecting the presence of a target CS198 polynucleotide in a test sample. The method comprises contacting the test sample with at least one CS198 specific polynucleotide or its complement, and detecting the presence of the target CS198 polynucleotide in the test sample, where the CS198-specific polynucleotide has at least 50% identity to a polynucleotide having any of the 27 fully defined sequences of 34-2894 bp (S1-27) given in the specification, or their fragments or complements. The composition and methods are useful in diagnosing, staging, monitoring, prognosticating, preventing or treating, or determining the predisposition of an individual to, diseases and conditions of the gastrointestinal tract, e.g. cancer and in gene therapy. This is the amino acid sequence of a synthetic peptide based on the predicted human CS198 protein sequence derived from the CS198 consensus sequence shown in seq id 27.
  Detecting the presence of a target CS198 polynucleotide in a test sample comprises contacting the sample with a CS198 specific polynucleotide and detecting the presence of the target CS198 polynucleotide in the test

Detecting the presence of target CS 198 polynucleotide, useful for detecting or diagnosing diseases of the gastrointestinal tract, concacting test sample with at least one CS 198-specific polynucle tract, comprises polynucleotide.

Claim 17; Page 49-51; 68pp; English.

The invention relates to a method of detecting the presence of a target CC CS 198 polynucleotide comprising contacting the test sample with at least CC cone CS 198-specific polynucleotide. The method is useful for detecting CC diseases of the gastrointestinal (GI) tract organs, particularly cancer. CC The CS 198 polynucleotides, polypeptides and antibodies are useful for detecting, diagnosing, staging, monitoring, prognosticating, preventing, ctreating or determining predisposition to disease and conditions of the CC ulcerative colitis, pancreatitis and Barret's oesophagus. The CS 198 culcerative colitis, pancreatitis and Barret's oesophagus. The CS 198 collypeptides are useful as delivery agents in diagnostic contained within these CC immunoassays, as components or as target sites for various therapies. CC introduces directed against at least one epitope contained within these CC polypeptides are useful as delivery agents for therapeutic agents, in CC diagnostic tests and for screening for conditions or diseases associated court the generation of chimeric antibodies for therapeutic use. The CS 198 cpolynucleotide is also useful in cancer herapy and arms are contained within these conditions or diseases associated court the generation of chimeric antibodies for therapeutic use. The CS 198 cpolynucleotide is also useful in cancer herapy and arms consisted the conditions or diseases associated court the generation of chimeric antibodies for the grant cancer. The CS 198 cpolynucleotide is also useful in cancer herapy and arms of the conditions or conditions or conditions or diseases. polynucleotide is also useful in gene therapy and drug screening. method of the invention provides an alternative, non-surgical diag method capable of detecting early stage GI tract disease such as the present sequence is human CS 198 polypeptide diagnostic

   therapy. ....
  The invention describes a method of detecting the presence of a target CS198 polynuclectide in a test sample. The method comprises contacting the test sample with at least one CS198 specific polynuclectide or its complement, and detecting the presence of the target CS198 polynuclectide in the test sample, where the CS198-specific polynuclectide has at least 50% identity to a polynuclectide having any of the 27 fully defined sequences of 34-2894 bp (S1-27) given in the specification, or their fragments or complements. The composition and methods are useful in

   The invention relates to reagents and methods for detecting diseases of the gastrointestinal (GI) tract. The method involves detecting the presence of target CS198 polymucleotide in the test sample. The methods and compositions of the present invention are useful for the diagnosis, prevention and/or treatment of diseases or conditions associated with aberrant expression or activity of the CS198 polypeptide, such as cancer of the gastrointestinal tract. These are also useful in gene therapy. The present sequence is a CS198 protein used to illustrate the method of the

   treatment of pancreatic cancer, using a substance that inhibits or binds to the protein or its DNA, including: an antisense oligonucleotide, short interfering RNA or ribozyme directed against the pancreatic protein, an organic molecule, particularly having a molecular weight below 5000, ce specially 300, that binds to the pancreatic DNA, an aptamer or (monoclonal) antibody, preferably human or humanized, that binds to the pancreatic DNA, or an anti-idiotypic antibody raised against the garcup, cytotoxic compound, immunostimulant and/or radioisotope. The novel thuman pancreatic proteins and their encoding DNA have cytostatic cancer. This sequences are useful for inhibiting transcription and/or expression of genes and proteins associated with pancreatic cancer. This sequence represents one of the novel human pancreatic proteins of the invention. Note: This sequence is not shown in the specification, it has been electronically downloaded from a DVD-rom to the control of the control of the control of the pancrean part of the control of the cont

   The present invention relates to human NC1, NC2 and NC3 proteins and coding sequences (ADG14340-ADG14345). The coding sequences are useful for detecting and screening proliferative insulin-producing cells as well as differentiation and proliferation of such cells and their precursors as analogous cells in treatment of e.g. PHHI and diseases due to differentiation/proliferation abnormality, diseases of the nervous system and pancreas. The coding sequences are also useful as spontaneous proliferation models of pancreas beta-cells. The novel genes NC1, NC2 and NC3 were isolated from the pancreas of PHHI patients, which were used in testing for the detection of proliferative insulin-producing cells or

  AAH32943 to AAH37195 and AAG73514 to AAG77788 represent human colon cancer associated nucleic acid molecules (N) and proteins (P), where the proteins are collectively known as colon cancer antigens. The colon cancer antigens have cytostatic activity and can be used in gene therapy cancer antigens have cytostatic activity and can be used in gene therapy and vaccine production. N and P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P expression. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing inactive proteins or to supplement the patients own production of P. Additionally, N may be used in the rectifying the colon cancer associated P, by inserting the nucleic acids to produce the colon cancer-associated P, by inserting the nucleic acids to produce the colon cancer-associated P, by inserting the proteins. N and P can be used in the prevention, diagnosis and treatment of colorectal carcinomas and cancers. AAH37196 to AAH77204 and AAB77789 represent sequences used in the exemplification of the present invention. N.B. Pages 666 to 682 and page 7053 of the sequence listing were missing at time of publication, meaning no sequences are present for SEQ ID NO:1027 to 1027 7201 and 7202.

                      The invention relates to a nucleic acid probe for measuring human gene CC expression, comprising any of the 27,400 fully defined nucleotide CC encoding at least 8 amino acids of any of the 6888 amino acid sequences fully defined in the specification. The probe is a single exon probe that CC hybridises under high stringency conditions to a nucleic acid molecule CC expressed in human cells or tissues. Also included are a spatially-CC addressable set of single exon nucleic acid probes for measuring human (comprising a plurality of single exon nucleic acid probes cited above, where each of the plurality of probes is separately CC and addressably isolatable or amplifiable from the plurality), a single exon microarray for measuring human gene expression, a wetcor comprising the single exon probe cited above, an ORF-encoded peptide comprising at least 8 CC contiguous amino acids of any of the above-mentioned amino acid contiguous amino acids of any of the above-mentioned amino acid sequences (optionally with conservative amino acid substitutions), an CC sequences (optionally with conservative amino acid substitutions) and called antibody that binds specifically to a peptide cited above, methods of selling and/or licensing single exon probes or microarrays to a customer desiring to measure gene expression, a method of providing to measure gene expression, a method of providing contains a database having a plurality of records (each record including data on the expression of a single exon probe cotted above. The probes and apparatus are useful in gene cotted above, methods and apparatus are useful in gene cotted above. The probes and apparatus are useful in gene cotted actions and apparatus are useful in gene cotted actions.

probes

used as tools

Sequence 36 AA;

used in a method to detect the presence of a target human CS198 polynucleotide in a test sample. The CS198 gene is useful as a marker for gastrointestinal (GI) tract disorders. The methods and products can be used in detecting, diagnosing, staging, monitoring, prognosticating, preventing or treating, or determining the predisposition to diseases and conditions of the GI tract, such as GI tract cancer, Barret's oescombarric ulcer, gastritis, leiomyoma, polyos (Tachro).

New gastrointestinal polynucleotides, CS198, and their detection - used for developing products for the diagnosis and treatment of gastrointestinal disorders, e.g. cancers, gastric ulcer or gastritis.

  specific exon, or in constructing genome-derived single exon microar. In addition, the probes are used in identifying and characterising alternative splicing events, in detecting and characterising gross alterations in the genomic locus that includes their exon, in assess. smaller genomic alterations, in priming the synthesis of nucleic action in expressing the ORF-encoded peptide. The present sequence is a single exon probe protein of the invention. Note: The sequence data this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at sequence.html?DocID=20030194704

Description

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

   s Swiss-Prot entry is copyright. It is produced the ween the Swiss Institute of Bioinformatics and to European Bioinformatics Institute. There are no
   leave the food to form premature prepupae, resulting in abbreviated larval development that translates directly smaller and lighter animals.

SIMILARITY: Belongs to the nuclear hormone receptor fami
   competence factor.
SUBCELLULAR LOCATION: Nuclear.
TISSUE SPECIFICITY: During L2 and L3 stages, strong constitutive expression is seen in the ring gland. Lower expression is detection specific neurons of the central nervous system (CNS) (at
  SIMILARITY: Contains 1 nuclear receptor DNA-binding CAUTION: Ref.2 and Ref.3 sequences differ from that
  erroneous gene model prediction.
   protein level).

  Total number of hits satisfying chosen parameters:
  Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
  seq length: 0
seq length: 2000000000

The invention relates to a method of detecting the presence of a target CS 198 polynucleotide comprising contacting the test sample with at least one CS 198-specific polynucleotide. The method is useful for detecting diseases of the gastrointestinal (GI) tract organs, particularly cancer. The CS 198 polynucleotides, polypeptides and antibodies are useful for detecting, disgnosing, staging, monitoring, prognosticating, preventing, treating or determining predisposition to diseases and conditions of the GI tract such as cancer, gastrit ulcer, gastritis, Crohn's disease, ulcerative colitis, pancreatitis and Barret's oesophagus. The CS 198 polypeptides are useful as standards or reagents in diagnostic immunoassays, as components or as target sites for various therapies. Antibodies directed against at least one epitope contained within these polypeptides are useful as delivery agents for therapeutic agents, in

   diagnostic tests and for screening for conditions or diseases associated with CS 198, particularly cancer. Monoclonal antibodies may also be used for the generation of chimeric antibodies for therapeutic use. The CS 198 polynucleotide is also useful in gene therapy and drug screening. The method of the invention provides an alternative, non-surgical diagnostic method capable of detecting early stage GI tract disease such as cancer. The present sequence is C-terminal portion of human CS 198 polypeptide

   CS198 polynucleotide in a test sample. The method comprises contacting the test sample with at least one CS198 specific polynucleotide or its complement, and detecting the presence of the target CS198 polynucleotide in the test sample, where the CS198-specific polynucleotide has at least 10% identity to a polynucleotide having any of the 27 fully defined sequences of 34-2894 bp (S1-27) given in the specification, or their fragments or complements. The composition and methods are useful in diagnosing, staging, monitoring, prognosticating, preventing or treating, or determining the predisposition of an individual to, diseases and conditions of the gastrointestinal tract, e.g. cancer and in gene therapy. This is the amino acid sequence of a synthetic peptide based on the predicted human CS198 protein sequence derived from the CS198 consensus sequence shown in seq id 27.
  Detecting the presence of a target CS198 polynucleotide in a test sample comprises contacting the sample with a CS198 specific polynucleotide and detecting the presence of the target CS198 polynucleotide in the test

  The invention relates to reagents and methods for detecting diseases of the gastrointestinal (GI) tract. The method involves detecting the presence of target CS198 polynucleotide in the test sample. The methods and compositions of the present invention are useful for the diagnosis, prevention and/or treatment of diseases or conditions associated with a pervention and/or treatment of theseses or conditions associated with the present expression or activity of the CS198 polypeptide, such as cancer of the gastrointestinal tract. These are also useful in gene therapy. The present sequence is a CS198 protein used to illustrate the method of the
  Diagnosing diseases such as cancer of the detecting aberrant expression or activity associated treatment methods.

  The invention relates to a method of detecting the presence of a target CC S198 polymucleotide comprising contacting the test sample with at least CC one CS 198 specific polymucleotide. The method is useful for detecting CC diseases of the gastrointestinal (GI) tract organs, particularly cancer. CC The CS 198 polymucleotides, polypeptides and antibodies are useful for CC treating, diagnosing, staging, monitoring, prognosticating, preventing, cc treating or determining predisposition to diseases and conditions of the CC GI tract such as cancer, gastric ulcer, gastritis, Crohn's disease, CC ulcerative colitis, pancreatitis and harrer's oseophagus. The CS 198 CC polypeptides are useful as standards or reagents in diagnostic cc immunoassays, as components or as target sites for various therapies. CC Antibodies directed against at least one epitope contained within these CC diagnostic tests and for screening for conditions or diseases associated with CS 198, particularly cancer. Monoclonal antibodies may also be used CC with CS 198, particularly cancer. Monoclonal antibodies may also be used CC polymucleotide is also useful in gene therapy and drug screening. The CC method of the invention provides an alternative, non-surgical diagnostic CC method capable of detecting early stage GI tract disease such as cancer. The present sequence is human CS 198 polypeptide

  the gastrointestinal (GI) tract. The method involves detecting the presence of target CS198 polynucleotide in the test sample. The methods and compositions of the present invention are useful for the diagnosis, prevention and/or treatment of diseases or conditions associated with aberrant expression or activity of the CS198 polypeptide, such as cancer of the gastrointestinal tract. These are also useful in gene therapy. The present sequence is a CS198 protein used to illustrate the method of the

  treatment of pancreatic cancer, using a substance that inhibits or binds to the protein or its DNA, including: an antisense oligonucleotide, short interfering RNA or ribozyme directed against the pancreatic protein, an organic molecule, particularly having a molecular weight below 5000, especially 300, that binds to the pancreatic DNA, an aptamer or (monoclonal) antibody, preferably human or humanized, that binds to the pancreatic DNA, an aptamer or pancreatic DNA, or an anti-diotypic antibody raised against the monoclonal antibody, any of which may be derivatized with a reporter group, cytocoxic compound, immunostimulant and/or radioisocope. The novel human pancreatic proteins and their encoding DNA have cytostatic activity. The novel sequences are useful for inhibiting transcription and/or expression of genes and proteins associated with pancreatic cancer. This sequence represents one of the novel human pancreatic proteins of the invention. Note: This sequence is not shown in the specification, it has been electronically downloaded from a DVD-rom provided with this specification by the European Patent Office.

  CC cancer antigens have cytostatic activity and can be used in gene therapy CC and vaccine production. N and P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P expression. For CC example, N and P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P expression. For CC example, N and P may be used to treat disorders associated with decreased CC expression by rectifying mutations or deletions in a patient's genome CC supplement the patients own production of P. Additionally, N may be used to produce the colon cancer-associated Ps, by inserting the nucleic acids into a host cell and culturing the cell to express the proteins. N and P CC can be used in the prevention, diagnosis and treatment of colorectal CC carcinomas and cancers. AAH37196 to AAH37204 and AAB77789 represent CC sequences used in the exemplification of the present invention. N.B. C pages 666 to 682 and page 7053 of the sequence listing were missing at the color and page 7053 and 7027 a

  The invention relates to a method of detecting the presence of a target CC S 198 specific polynucleotide. The method is useful for detecting cone CS 198 specific polynucleotide. The method is useful for detecting CC diseases of the gastrointestinal (GI) tract organs, particularly cancer. CC The CS 198 spolynucleotides, polypeptides and antibodies are useful for CC detecting, diagnosing, staging, monitoring, prognosticating, preventing, treating or determining predisposition to diseases and conditions of the CG Itract such as cancer, gastric ulcer, gastritis, Crohn's disease, CC ulcerative colitis, pancreatitis and Barret's geosphagus. The CS 198 CC polypeptides are useful as standards or reagents in diagnostic CC immunoassays, as components or as target sites for various therapies. CC immunoassays, as components or as target sites for various therapies. CC diagnostic tests and for screening for conditions or disease associated CC with CS 198 particularly cancer. Monoclonal antibodies may also be used for the generation of chimeric antibodies for therapeutic use. The CS 198 colynucleotide is also useful in gene therapy and drug screening. The CC method capable of detecting early stage GI tract disease such as cancer. CC method capable of detecting early stage GI tract disease such as cancer. CC method capable of detecting early stage GI tract disease such as cancer.

  diagnosing, staging, monitoring, prognosticating, preventing or treating, or determining the predisposition of an individual to, diseases and conditions of the gastrointestinal track. e.g. cancer and in gene therapy. This is the amino acid sequence of a synthetic peptide based on the predicted human CS198 protein sequence derived from the CS198 consensus sequence shown in seq id 27.
   The invention describes a method of detecting the presence of a target CS198 polynuclectide in a test sample. The method comprises contacting the test sample with at least one CS198 specific polynuclectide or its complement, and detecting the presence of the target CS198 polynucleotide in the test sample, where the CS198-specific polynucleotide has at least 50% identity to a polynucleotide having any of the 27 fully defined sequences of 34-2894 bp (S1-27) given in the specification, or their fragments or complements. The composition and methods are useful in

  diseases of the gastrointestinal (GI) tract organs, particularly cancer. CC The CS 198 polynucleotides, polypoptides and antibodies are useful for detecting, diagnosing, staging, monitoring, prognosticating, preventing, creating or determining predisposition to disease and conditions of the CG Itract such as cancer, gastric ulcer, gastritis, Crohn's disease, culcerative colitis, pancrestitis and Barret's oscophagus. The CS 198 CC ulcerative colitis, pancrestitis or reagents in diagnostic clamunoassays, as components or as target sites for various therapies. CC Antibodies directed against at least one epitope contained within these CC polypeptides are useful as delivery agents for therapeutic agents, in diagnostic tests and for screening for conditions or diseases associated CC with CS 198 particularly cancer. Monoclonal antibodies may also be used CC method of the invention provides an alternative, non-surgical diagnostic method capable of detecting early stage GI tract disease such as cancer. C content of the content of the present sequence is a peptide derived from human CS 198 polypeptide.

   Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
